

Dear Ms. Channa Newell,

I request that you distribute my comments to each committee member.

- Hold patent holders responsible for contamination events — not pit farmer against farmer.
- Protect high-value crops in Oregon, such as specialty seed, wheat and alfalfa, which have been put at significant risk by GE contamination.
- Protect communities from the unwanted presence of invasive GE weeds, such as Creeping Bentgrass, another experimental GE crop that escaped field trials and continues to spread in Malheur and Jefferson counties.

Thank you,

Marie Wakefield
