

I am a concerned citizen who grows food for family consumption due to the fact that corporations have continued to poison our food supply and show no remorse or concern for these actions. Cross contamination makes it almost impossible to keep these chemicals out of our current crops, and contaminates seed for future crops, not to mention loss of health, and loss of income for anyone who sells their crops. Please help us to protect our land and food. It is the responsibility of our law maker's to protect the people, not corporate greed and irresponsibility.
