House Bill 2396

Introduced and printed pursuant to House Rule 12.00. Presession filed (at the request of House Interim Committee on Health Care for Oregon Students Public Interest Research Group (OSPIRG))

SUMMARY

The following summary is not prepared by the sponsors of the measure and is not a part of the body thereof subject to consideration by the Legislative Assembly. It is an editor's brief statement of the essential features of the measure as introduced.

Makes legislative findings regarding provision of antibiotics and its relation to public health. Prohibits administration or other provision of medically important antibiotic to food-producing animal for nontherapeutic purposes.

Requires operator of concentrated animal feeding operation to file annual report regarding administration of medically important antibiotics to food-producing animals at operation.

Makes prohibition and reporting applicable to provision of antibiotics to food-producing animals on or after January 1, 2018.

 Declares emergency, effective on passage.

A BILL FOR AN ACT

Relating to protecting antibiotics for human public health; and declaring an emergency.

Be It Enacted by the People of the State of Oregon:

SECTION 1. As used in sections 1 to 5 of this 2017 Act:

(1) “Food-producing” means:
(a) All cattle, swine or poultry, regardless of whether a specific animal is raised for the purpose of producing food for human consumption; or
(b) Any animal of a type that the Oregon Health Authority identifies by rule as livestock typically used to produce food for human consumption.

(2) “Livestock producer” means a person raising a food-producing animal for commercial purposes.

(3) “Medically important antibiotic” means a drug that is composed in whole or in part of:
(a) A form of penicillin, tetracycline, macrolide, lincosamide, streptogramin, aminoglycoside, sulfonamide or cephalosporin; or
(b) A drug from an antimicrobial class that is categorized as critically important, highly important or important in the World Health Organization list of Critically Important Antimicrobials for Human Medicine (4th Revision, 2013), or a subsequent revision or successor document issued by the World Health Organization that is recognized by rule by the Oregon Health Authority.

(4) “Nontherapeutic purpose” means growth promotion, feed efficiency, weight gain or disease prevention.

SECTION 2. The Legislative Assembly finds and declares:

(1) The World Health Organization has stated that “without urgent, coordinated action by many stakeholders, the world is headed for a post-antibiotic era, in which common infections and minor injuries which have been treatable for decades can once again kill.”

(2) The United States Food and Drug Administration and the Centers for Disease Control
and Prevention have stated that there is a definitive link between the routine use of antibiotics for both disease prevention and growth promotion on industrial farms and the crisis of bacterial antibiotic resistance in humans.

(3) The issue of antibiotics overuse, whether on humans or animals, is a significant and urgent human health matter.

(4) Up to 70 percent of all antibiotics sold in the United States are given to food-producing animals, often for the nontherapeutic purpose of promoting growth or for the purpose of compensating for the effects of insanitary and overcrowded conditions.

(5) Many of the antibiotics provided to food-producing animals are identical to, or from the same family as, drugs used in human medicine to cure serious diseases. According to the Centers for Disease Control and Prevention, because the antibiotics are similar, bacteria resistant to the antibiotics provided to food-producing animals will also be resistant to the antibiotics used in humans.

SECTION 3. The purpose of sections 1 to 5 of this 2017 Act is to protect public health by preserving the effectiveness of antibiotics now and for future generations by eliminating the overuse of those critical medicines, resulting in reducing the rise and spread of antibiotic-resistant bacteria.

SECTION 4. A livestock producer may not provide a medically important antibiotic to a food-producing animal for a nontherapeutic purpose unless:

(1) There is a significant risk of a disease or infection that is present on the premises being transmitted to the food-producing animal;

(2) The administration of the medically important antibiotic to the food-producing animal is necessary to prevent transmission of the disease or infection;

(3) The medically important antibiotic is provided to the food-producing animal for the shortest duration necessary to prevent transmission of the disease or infection; and

(4) The medically important antibiotic is provided to the smallest number of food-producing animals necessary to prevent transmission of the disease or infection.

SECTION 5. (1) A livestock producer that operates a concentrated animal feeding operation as defined by the United States Environmental Protection Agency must file an annual report under this section in a form and manner required by the Oregon Health Authority by rule. If the livestock producer and a contracting entity enter into an agreement for the contracting entity to assume the annual report filing duty, the contracting entity shall include in the annual report the name and address of the livestock producer on whose behalf it is submitting the annual report. If any medically important antibiotics were provided to food-producing animals during the reporting period, the annual report must contain the following information:

(a) The total number of food-producing animals provided with medically important antibiotics;

(b) The types of medically important antibiotics provided;

(c) The amount of each medically important antibiotic used;

(d) The species of food-producing animals that were provided with medically important antibiotics;

(e) The length of time that a medically important antibiotic was intended to be provided to the food-producing animals;

(f) The dosage of medically important antibiotic that was intended to be provided to the
food-producing animals;

(g) The method for providing the medically important antibiotic to the food-producing animal;

(h) The purpose for providing the medically important antibiotic to the food-producing animal; and

(i) The type of disease or infection, if any, that was intended to be prevented due to the provision of the medically important antibiotic.

(2) For purposes of subsection (1)(h) of this section, the purpose for providing a medically important antibiotic to a food-producing animal must be reported as:

(a) Disease prevention;

(b) Disease control; or

(c) Disease treatment.

(3) Information reported under this section is a public record and, notwithstanding ORS 192.501 and 192.502, is not subject to exemption from disclosure. The Oregon Health Authority may not redact, withhold or delay the release of information reported under this section.

(4) The Oregon Health Authority shall consult with the State Department of Agriculture as necessary to fulfill the requirements of this section.

(5) The Oregon Health Authority may adopt rules for the administration and enforcement of this section and section 4 of this 2017 Act.

(6) ORS 431.150, 431.155 and 431.160 apply to this section and section 4 of this 2017 Act.

SECTION 6, Sections 4 and 5 of this 2017 Act apply to the provision of medically important antibiotics to food-producing animals on or after January 1, 2018.

SECTION 7. This 2017 Act being necessary for the immediate preservation of the public peace, health and safety, an emergency is declared to exist, and this 2017 Act takes effect on its passage.
