

To whom it may concern,

This bill takes our medical freedom away if I or anyone choose to not vaccinate just for the HPV virus or the flu that choice will not be mine anymore. This is not just about the measles this is about taking our rights away. We live in America for a reason for freedom, freedom to choose as parents what is right for our children. If the CDC comes out with any vaccine from here on out it could be for a disease or not we will be forced to give to our children we will not have a choice. This is wrong on so many levels.

My son has been diagnosed with a egg, gluten, and dairy allergy. There is lots more he is allergic to as well, but those are at the top of the list. Since we figured this out and got him off these foods he has become a different kid. Excelling at school where he was failing because he was in so much pain and extremely tired the list goes on. Some of these vaccines risk a concern with some of the ingredients for my son. In talking with the doctor I learned if this bill passes I would be forced to test them out and see what happens. Let me say that again test it out see what happens. Do you have children? Have you ever experienced a kid that is allergic to so many things and he can't even get dressed because his body is inflamed on the inside screaming his clothes hurt him. Every morning screams his pants don't feel good his socks /shoes. Have you experienced night terrors where you kid is up screaming and wants help but can't wake up? Everyday crying his stomach and brain hurt? It's horrible!!! Thank God we had the dr do a blood test and he is off all these things and after 4months all these horrible things happening to him are gone! Now let me go back if this bill passes the dr says I can't get a medical exemption unless after trying the vaccines (that could affect him) out that may cause him severe harm then I could try filing for one. Would you want to try this experiment out with your child? I no my kid better than anyone I am his mother this choice should be mine. I should be able to have the medical choice to no what is best for me child.

If you need a ingredients list from the FDA on what is in some of these vaccines and what would happen to my son let me no I will provide.

Please reconsider not pushing this bill through.

Sincerely,

Christal Unger
