

As a parent with 2 copies of MTHFR I can only detox at 20 percent my kids are the same confirmed copies of MTHFR. We have well documented adverse effects to vaccines and it is our choice with informed consent what we put into our bodies.

we have a family history of autoimmune diseases and we have a gene called the MTHFR Gene that causes us not to be able to detox what is in the vaccines. we both and as well as our children have documentation of severe adverse reactions after vaccines so now we no longer get vaccines and it should be a family's choice based on health and medical history. Where there's a risk there must be a choice! Not to mention I'd rather get lifelong immunity from the actual disease that protects you later in life from cancers than constantly having to get vaccinated. And just because you get vaccinated today doesn't mean that you are now immune to it most people are non-responders to vaccines so you're getting the vaccine but it's not doing anything it's not giving you any immunity. In 1986 the government removed the ability to sue them for any liabilities from damages caused by vaccines so if something happens to me or my children the government isn't held liable the vaccine manufacturers are no longer held liable. The taxpayers have to pay for a vaccine damage fund which has paid out over 4 billion to children who have been vaccine damaged. So now we no longer take that risk and that will be our choice. There hasn't been one death from the measles here and there's only been one case in Oregon and that case was partially vaccinated already. The measles vaccine is a live virus vaccine and so it spreads as well and can give symptoms like the measles. here in Oregon for vaccinations for the MMR vaccine is 94% if you count that most adults aren't caught up on their vaccines we are only 60% so the herd immunity myth is not real. On the CDC website it says the adverse reactions are death encephalitis and brain swelling as well as autism if you have a product that has those kind of side effects there must be a choice what is injected into our bodies.

Informed choice must always be with a product that has never been tested properly and has death as a side effect. I will be forever crippled by my vaccine injury!
