

I'm writing today to urge you to oppose HB 3063, that will rid our state of current exemptions for mandated vaccines. I am an Early Childhood Special Educator in Oregon. I am very aware of childhood 'emergencies'. We see all the very young neuro damaged children come through our doors for 'treatment' and 'services'. We experience epidemics of neurological disorders of every kind, developmental delays, genetic disorders, sensory disorders, drug and alcohol effects, birth injuries. The life long suffering among our children and their families is enormous. The following issues must be weighed in on!

Vaccine rates are NOT an emergency. Measles is NOT an emergency. Fact: Live Measles virus is carried by the vaccinated for 15-30 days, putting unvaccinated at risk!

Oregon has some of highest vaccine demands in nation for children entering kindergarten. Oregon is at least 95% vaccinated. The Measles outbreak hysteria was manufactured and orchestrated by CDC, supported by Public Health and AMA to put public in fear and push legislation. It is a tried and true strategy that worked in CA. The emergencies that we should be talking about are the epidemics spreading like wild fire: ADHD, AUTISM, ALLERGIES, ASTHMA, ANXIETY, AUTOIMMUNE DISEASES, CANCER. Where is the hysteria about these conditions? and the investigation into why our children have never been sicker?

There is no debate or balanced coverage tolerated in the public discourse or media reports. The censorship on this issue seriously threatens our democratic and civil rights;

Our freedom of speech, the freedom to question, ask for information, get open, honest, balanced information, demand safe medical drugs and approaches is all being threatened, withheld, and censored so there is now little public space to debate vaccine safety and ultimately demand safe vaccines.

Current exemptions in Oregon are not communicated clearly to families. The public is afraid to question the 'schedule' or even request the available exemption process in Oregon. If one even suggests reading a critique on vaccine safety, one is vilified, as dangerous and one's character, career, and credentials are threatened.

Vaccines are 'unavoidably unsafe' (2011, U.S. Supreme Court; Justice Sotomayor (Bruesewitzv.Wyeth)-

What is being forced upon us with this bill is the mandatory injection of dangerous neuro toxins, carcinogens, hormone disrupters including heavy metals, formaldehyde, glysohate, aborted fetal cells and various animal DNA to name just a few. There are hundreds of studies showing correlations of these toxins with delirious health issues. There is no tolerated open public debate on vaccine safety which would allow a demand for 'clean' vaccines. Information and 'manipulated' scientific data is used to defend the current vaccine schedule and to lie to the public that vaccines are safe. Big Pharma companies that make the vaccines are 'immune' from law suits. Public discourse has been effectively 'silenced'.

Here are the studies, the doctors are ignoring:

The CDC and medical establishment is beginning to utilize a term, 'medical neglect' to report families to DHS, remove children, and considerations for wide spread 'impoundments' are being considered, for 'the public good'. Contemplate the reality of the potential state response to 'non compliant' families, many of whom already have at risk, neuro damaged children, if bills like HB 3063 take hold. I know of a

family who was visited by police in the evening after missing a chemo appt. (and they called to cancel!) I know of a family who lost a child into custody for missing medical appts. Not to be alarming, but alarming it is. This is what facism looks like. Not an invasion or a coup.... but a slow engulfing.

In my strongest (well researched) opinion, this is an experiment in public health that will someday be known as the most devastating failed human experiment ever... Educate your selves before you strip us of our basic right to choose, be informed, and publicly debate so that **vaccines can evolve, become safer, and be a welcome medical preventative approach.**
