

Dear Representatives/Senators In Favor of HB 3063,

My name is Ashley Looney and I oppose HB 3063. Children deserve the right to an education without regard to vaccination status. Vaccination, like any medical procedure, carries potential risk that can result in injury and even *death*. Where there is risk, there **must** be choice. Healthcare is not a one size fits all. Parents must have the jurisdiction to make informed choices and weigh the risk/benefit factor for their unique families; without compromising their children's academic needs. Removing philosophical and religious exemptions on a liability-free product, that has *never* been tested against an inert placebo for safety and contains aborted fetal DNA is radical and tyrannical. Government overreach must end where our flesh begins. Please keep pharmaceuticals separated from state. Thank you for welcoming my stance.

Our children - Our Bodies - Our jurisdiction.

Below are credible sources that support **opposition** of HB 3063, for both medical and philosophical purposes.

1. Ingredients

(Includes aborted fetal DNA : MRC-5 & WI-38)

2. Compensation for vaccine injury to date

(Over 4 billion dollars paid out to victims harmed by vaccines)

3. VAERS site for vaccine injury

4. HHS lawsuit that shows no safety studies have been conducted and reported to Congress for 32 years.

5. 1986 vaccine law that shields vaccine manufacturers from liability

(The ONLY liability-free product on the market)

6. Supreme Court rules vaccines "unavoidably unsafe"
