

To Whom It May Concern:

My name is Katie Sperle and I am writing this letter in strong opposition of HB-3063. My children are ages 15 and 12 attending public school in Silverton Oregon. My children have never had so much as an ear infection, never one dose of antibiotics, yet are somehow seen as a health threat to fully vaccinated children? Good news, my kids cannot spread disease they do not have!

The passing of this bill is a violation of so many of my and my children's rights as citizens of the United States of America. Our freedom of religion is supposed to be protected by the constitution. Our religion opposes abortion, therefore opposing injection of human cells contained in vaccines.

In a system where we are now politically correct in every form, not discriminating against ones: gender, sexual preference, height, weight, color, race, yet are now inadvertently attacking religion in the argument of 'health for the greater good.' An argument that holds very little value when the vast majority of adults in our country over the age of 30 are under-vaccinated via the current CDC schedule, and yet the most common diseases we are seeing now in kids are life long, such as; Cancer, Diabetes, Autoimmune Disorders, Obesity, ADHD, Autism, and Anxiety disorders.

The definition of 'rape' is forced sexual penetration, defined as a crime. I see forced vaccination no differently. Vaccine manufacturers are protected by the federal government from all legal recourse. They have absolutely zero incentive to test or insure the safety of their products knowing full well the federal government will pay out their compensation claims. Laws like this just incentivizes them to make more unnecessary vaccines, with little to zero testing. Why would they spend money on testing when they can spend it on lobbyists pushing for laws to force their products on unwilling consumers?

All of this being said, you can pass a law like this thinking it will strong arm parents into forgoing their ideals and beliefs, but it won't. Maybe a few people will cave when backed into a corner, but most like myself will absolutely not waver. Instead the school systems will suffer when our children are removed. Again, remember our healthy children are not spreaders of diseases they DO NOT HAVE. If just half of the 30,000+ students with current exemptions in the state of Oregon were removed from the public education system, the financial ramifications to schools would be tremendous. Can our schools afford this type of legislation?

I strongly encourage you all to look at this more objectively, and take the whispers of the pHARMaceutical companies out of your ears for just one moment.

Sincerely,

Katie Sperle
