

I oppose House Bill 3063.

I believe a one size fits all approach does not take into consideration children and people who may be susceptible to vaccine injury or triggering of inflammation and auto-immune related disorders. We have reached a point where it is possible to test for such abnormalities, including impaired detoxification pathways, which may make it difficult for some people's bodies to safely eliminate the amount of toxins entering the body from routine vaccinations. I am not opposed entirely to vaccines, however, there have not been enough (non-biased) studies on vaccine safety to justify the quantity of vaccines in the current recommended schedule. We cannot continue to blindly treat everyone's body the same and allow there to be casualties as a normal part of the process of this so called "war on communicable disease".

In addition, the fear mongering interwoven in the marketing campaign to convince Americans that more vaccines are the only way to save humanity is unacceptable. They use statistics from countries where lack of sanitation and nutritional deficiencies play a huge role in the outcome of a disease in order to justify the need to vaccinate. Most of the public is completely unaware of the existence of the National Vaccine Injury Compensation Program or the fact that the Supreme Court has ruled that vaccines are "Unavoidable Unsafe". Some of the public also blindly believe the false statement that vaccines are 100% effective 100% of the time and for life. The people who are the most emotionally fueled to repeat vaccine rhetoric and have the most disdain for anti-vaxxers tend to be the most uninformed citizens who get their information from mainstream news, which we know is in the pockets of Big Pharma. The media is allowed to paint a picture of those that question or choose to refrain from the vaccine schedule as followers of ignorant celebrities whose only claim is that vaccines indeed directly cause autism. The truth we are finding is that it is a cumulative total load of toxins that tip some children over the edge towards something like autism. I know children who have had zero vaccines yet have manageable diagnosis of being on the autistic spectrum. These children were exposed to other environmental toxins combined with their genetic susceptibility, which tipped them towards the autistic spectrum. I can only imagine their fate had their parents chosen to vaccinate. They would most likely be severely damaged and not able to continue with a normal life.

Taking away a parent's right to choose is unconstitutional. Allowing giant corporations to decide what needs to be injected into human bodies, while they stand to make a profit, is immoral!

Thank you for your time,
