

To Whom It May Concern:

I vehemently oppose HB 3063. It is against our rights as humans and as citizens to forcibly inject people or their children without their consent. The science of vaccines is far from settled. I do not chose to receive any pharmaceutical product where the manufacturer is not held responsible for their product, where proper and complete informed consent is not given, and where it is not even acceptable to question the efficacy or safety of these products. Where there is risk, there must be choice. Please do not push this bill forward.

Sincerely,

Kristy Elizabeth Hoppe
