

I am writing to testify in opposition of House Bill 3063. I attended the hearing yesterday among the 1000 others, the vast majority were citizens who came to oppose this bill most themselves vaccine injured or the parents of vaccine injured or killed children.

This bill is a violation of basic human rights. Where there is harm there must be a choice. You can pretend there's a choice involved. That choice being submit two injections or leave. That is not a choice. That is a threat and a blackmail.

Any and all injections that the government decides. And I've seen the decision-making process in action and it is pathetic.

The chair asked a very important question about how a vaccine can be removed from the mandated list. The answer was telling was it not? It's never been done before. The person giving that testimony also stated that only illnesses that were communicable school-yard diseases were considered, and he contradicts himself because two of the vaccines that are currently on the list are not communicable diseases. Millions of Oregonians have been permanently harmed by vaccines .

Many absolute tax percentage and they seem to be completely ignored by the reporting and by the response of those in favor. Four cases of measles in the state of Oregon is not a state of medical emergency. Oregon vaccine rates exceed the national average . Measles was never eliminated in the United States. The vaccine manufacturers are liability free and Merck is more guilty of fraud and abuse than Monsanto. And these are the products you want to inject into our children with no choice? No way. Millions of people are waking up to the fraud and abuse of the pharmaceutical industry with vaccines being their primary cash cow. Whistleblower Thompson of the CDC still remains to be subpoenaed by Congress.

The vaccine injured or the people making a religious or conscientious choice not to inject disease into their persons or their children will not comply with government mandates. It is not the business of the government to make medical decisions about the citizens. To claim that the needs of the immunocompromised trump the needs of the vaccine injured is a ridiculous argument. The immunocompromised have much more to fear than The diseases which vaccines represent. It's not even logical to assume that an immuno compromised child would be safe if 100% of the children at a school were vaccinated because the adults are not, the Library's is not, the parks are not, the grocery store is not, The capital building in Salem is not. Is the next go to protect the middle compromised to have every citizen of the United States receive 72 vaccines without a choice? And I'm sure 1000 other people have mentioned that the pharmaceutical companies have currently more than 200 vaccines ready for fast track approval. And I'm sure you've also been told 1000 times that there are in fact no double blind safety studies , no studies of vaccines combined and no studies comparing the health of the vaccinated versus the unvaccinated. Currently the pharmaceutical companies are being sued For intentionally hiding adverse side effects in their medication trials. And you propose we trust these manufacturers with The lives of our children? That is absolutely insane. The emergency is vaccine safety and that is what needs to be addressed before any consideration have you been promoting vaccination much less mandating it. Mandating medical procedures has no place in a democracy whatsoever.

- Protecting the rights of ALL CITIZENS of Oregon is the job of the elected officials.

Respectfully,

Kathy Prout
