

Oregon representatives

My name is Jody Cantrell I have lived in the state of Oregon my whole life. I have four children two of them are vaccinated one is too young and the other is not vaccinated! I am not anti-vaccinator! I know that vaccinations can do good things. I am against House Bill 3063, because it is taking my right away as a parent to do what I think is best for my child. It is an overreach and a blanket policy. Blanket policy's are rarely a good course of action. The one child that I have that is not vaccinated has an allergy to eggs. She was hospitalized for three days when she was two years old and almost died because doctors would not recognize that it was a food allergy. If I would not have done bloodwork on my own through bio tech, who is a reputable lab, I don't want to think about what would've happened to her. Her allergy is not severe enough to the medical profession to be considered a stipulation for not being vaccinated! There are some vaccinations that we are considering giving her, she has had a compromised immune system from being sick a lot! Doctors do have a place and do many wonderful and good things. Unfortunately in my experience I have ran into some doctors that don't listen to what I have to say and a handful of friends have had the same experience. One of my friends sons got vaccinated while he was sick with a fever because the doctor said he would be fine and now he's mentally disabled and has seizures and will never be the same, she got government funding because of his disability from being vaccinated unjustly! The other friend, her three-month-old baby got vaccinated while she had thrush and had a low-grade fever she died seven days later! Do you know what it's like to have to comfort somebody when their infant has died because of the doctors having an agenda to make sure everyone is vaccinated when they think they need to be vaccinated! Now if these mothers would have listened to their instincts (gut) their children would be unharmed! I am not giving lots of details because I know you want these testimonies to be short. I am opposed to this bill because it takes my right as a parent away to say what is best for my child! I carried her I birthed her I know her better than anyone. I listen to what doctors tell me but I also listen to my instincts and what I know is true is that all children are not equal and not the same and the medical profession does not broaden their specifications when it comes to what medical exemption means for children. There are other ways children can be affected when they're allergic to something that's in the carrier. Maybe having a prescreening to make the side effects or deaths to vaccines less. And all ingredients are not disclosed on vaccines they tell you what most of them are and then it says other ingredient. If there were more precautions taken before vaccines are given maybe the government would save some money too. considering that in 2016 230 million dollars was awarded in vaccine injury victims! If this bill passes it will affect the school system negatively, especially small schools. Because many parents will pull their kids out of school including me. I Love this state and the united states with all my heart, but this bill is an overreach over government and invades my rights as an American citizen and a human being! I'm opposed to this bill.
