

Hello, re SB 283

I am 69 years old. I was a psychiatric social worker and until age 58 a bit of a workaholic and quite successful.

Then I became severely electro-sensitive. There are thousands of scientific studies showing health effects of electro-magnetic fields. More and more of the populace will almost certainly become affected as 5G and other forms of wi-fi and more and more cell towers, etc proliferate.

This sensitivity has made my life an overwhelming challenge. I can not stay at most hotels because the wi-fi gives me a migraine headache and I get tightness around my heart. There are many establishments and buildings I cannot be in, including homes where people will not turn off their wi-fi.

I could go on and on, but mostly want to give you one person's word and warning that your children, your friends, and yourself are in jeopardy as these sources increase.

If you're a visual person, look at the 19: 40 mark of this video and see photographic evidence of DNA damage.
