

I would like to let you know I support this bill. I think it's a positive for all road users but especially so for cyclists. For cyclists, the moments that he/she has the least amount of control over their bicycle are when starting from a full stop and coming to a full stop. I believe being able to treat stop signs as a yield will reduce these instances and will make going through an intersection a lot safer, not only for cyclist but for all road users.

Here's an excellent animated video from Spencer Boomhower that explains why stops-as-yields is so important to bicycle users.

Thank you for your time.
