

Hello,

I live in Portland and strongly support SB 998. I regularly drive and bike around town, and notice how inefficient it is for bicyclists pulling up at stop signs to come to a complete stop, and then have to start moving again from a dead stop. It's simple physics. I think this bill will contribute to increased safety and efficiency for all modes of travel and am excited to see it coming up for a vote this year!

Thanks!
