

Senators: I am out on my 40 acres in Colton, Oregon preparing the ground to receive 1000 more seedlings like the tree in the attached picture. We tree farmers, foresters and loggers are the oxygen producers and sequesterers of carbon. Younger trees that are growing capture more carbon up to a certain age. Then when the trees get too old...it starts breaking even with O₂ production. Please exempt our group so we can produce the O₂ for the world. Now back to work for me. Jim Worl Forester 360 751 1440
